

Postmenopausal women and men ≥ 50 yrs committed or exposed to ≥ 3 months oral glucocorticoids

Counselling and general measures (see Table 5)

Previous fracture or
age ≥ 70 yr or
prednisolone ≥ 7.5 mg/d

No previous fracture, age < 70 yr,
prednisolone < 7.5 mg/d

Assess risk: adjusted FRAX \pm BMD

Above intervention
threshold*

Below intervention
threshold*

Consider treatment
(see Section 9)

Monitor as indicated (see Table 7)

* Threshold will vary according to country

Premenopausal women and men < 50 yrs committed or exposed to ≥ 3 months oral glucocorticoids

**Consider dose of prednisolone and clinical risk factors
Counselling and general measures (see Table 5)**

Previous fracture

No previous fracture

**Consider treatment
(see section 14)**

**Treatment decisions
based on clinical judgment
Limited evidence base**

Monitor as indicated (see Table 7)
